

Built on the Powerful Microsoft Azure Platform, InfoLibrarian Server Helps Companies Provide Both Context and Understanding of Their Data

MICROSOFT AZURE ISV PROFILE: INFOLIBRARIAN CORPORATION

InfoLibrarian Corporation, founded in 2004 in Rochester, N.Y., is a metadata management solution provider that lets knowledge workers manage and access metadata relating to data and processes that affect data. InfoLibrarian targets IT organizations that rely on data and need data governance capabilities to drive integration, data warehousing and BI projects.

WHAT WE OFFER

Companies struggle with data systems that are ineffectively documented. This is a key pain point for new development and support. InfoLibrarian automates the task of documenting your IT assets and processes. Metadata is used to describe, add context, and provide the knowledge needed to get your arms around data.

Ingest metadata and documentation from source applications, tools, or data sources. Onboarded metadata is cataloged within a centralized metadata registry. Once configured, you can use a command line interface to schedule automatic polling of the metadata, which captures deltas and changes over time.

Access content any time. Immediately leverage the powerful search, impact analysis, and data lineage capabilities of the InfoLibrarian Portal. Navigate custom views targeted for individual user communities. Utilize advanced searching and direct access to get the reports you need on demand in real time.

InfoLibrarian is bundled with rich modules such as business and technical views, change management, collaboration, and the InfoLibrarian Enterprise Control Center. Users can find and contribute to the enterprise's metadata registry, where mission-critical and necessary metadata is captured permanently.

WHAT OUR CUSTOMERS ARE SAYING

"InfoLibrarian finds the needle!" – Christopher Kovak, Director of Digital Transport, Fujifilm Inc.

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted in Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
